

Д/З к уроку 10.7

① Найти экстремумы вкр и глоб. ф-и.

1)  $f(x) = x + e^x$

$f'(x) = 1 - e^x$

$f'(x) = 0$  в.т.  $x = 0$  — единств. точка

$f'(-1) > 0$ ,  $f'(1) < 0$

2)  $f(x) = x \cdot \ln x$ ,  $D(f) = (0; \infty)$

$f'(x) = x' \cdot \ln x + x \cdot (\ln x)' = 1 \cdot \ln x + x \cdot \frac{1}{x} = \ln x + 1$

$f'(x) = 0$  в.т.  $x = 1/e$

$f'(0.1) \approx -1.302 < 0$

$f'(2) \approx 0.69 > 0$

3)  $y = \frac{1}{1-x^2}$

$y' = + \frac{2x}{(1-x^2)^2}$ ,  $y' = 0$  при  $x = 0$ , т.  $x = \pm 1$  — асимптоты

$(-\infty; -1) \cup (-1; 0)$  —  $\nearrow$

$(0; 1) \cup (1; +\infty)$  —  $\searrow$

$y'(-2) = -\frac{4}{9} < 0$ ,  $y'(-0.5) = -0.64 < 0$

$y'(0.5) = 1.7 > 0$ ,  $y'(2) = \frac{4}{9} > 0$

② Найти экстремумы функции

1)  $f(x) = x^3 - 3x + 1$

$f'(x) = 3x^2 - 3$ ,  $f'(x) = 0$  при  $x = \pm 1$

$f''(x) = 6x$

$f''(\pm 1) = \pm 6$

$\Rightarrow f'(x) = 0, f''(-1) < 0 \Rightarrow x = -1$  — т. макс.  
 $f'(x) = 0, f''(1) > 0 \Rightarrow x = 1$  — т. мин.

2)  $y = e^{x^2-4x+5}$

$$y' = e^{x^2-4x+5} \cdot (x^2-4x+5)' = e^{x^2-4x+5} (2x-4)$$

$$y'(x) = 0 \quad \Leftrightarrow \quad x = 2$$

$$y''(x) = (e^{x^2-4x+5})' (2x-4) + e^{x^2-4x+5} (2x-4)' = e^{x^2-4x+5} ((2x-4)^2 + 2)$$

$$y''(2) = e \cdot 2 = 2e$$

$$y'(2) = 0, \quad y''(2) > 0 \Rightarrow x = 2 - \text{т. локального минимума}$$

3)  $y = x - \arctg x$

$$y' = 1 - \frac{1}{1+x^2}$$

$$y'(0) - \text{не существует} \Rightarrow \text{нет лок. экстр. и макс.}$$

$$x = 0 - \text{является критической точкой}$$

③ Найти интервалы выпуклости и т. перегиба.

1)  $f(x) = e^{-x^2}$

$$f'(x) = (-x^2)' \cdot e^{-x^2} = -2x \cdot e^{-x^2}$$

$$f''(x) = (-2x)' \cdot e^{-x^2} + (-2x) \cdot (e^{-x^2})' = -2 \cdot e^{-x^2} + 4x^2 \cdot e^{-x^2} = 2e^{-x^2} (2x^2 - 1)$$

$$f''(x) = 0 \quad \Leftrightarrow \quad x = \pm \frac{1}{\sqrt{2}}$$

$$f''(-2) = 7 \geq 0$$

$$f''(0) = -1 \leq 0$$

$$f''(2) = 7 \geq 0$$

$$\Rightarrow (-\infty; -\frac{1}{\sqrt{2}}) \cup (\frac{1}{\sqrt{2}}; +\infty) - \text{ф-я } \cup$$

$$(-\frac{1}{\sqrt{2}}; \frac{1}{\sqrt{2}}) - \text{ф-я } \cap$$

2)  $y = \cos x$

$$y' = -\sin x$$

$$y'' = -\cos x$$

$$y''(x) = 0 \quad \Leftrightarrow \quad x_1 = \frac{\pi}{2} + 2\pi n$$

$$x_2 = \frac{3\pi}{2} + 2\pi n$$

$$y''(0) = -1 \leq 0$$

$$y''(\pi) = 1 \geq 0$$

$$y''(2\pi) = -1 \leq 0$$

$$(-\frac{\pi}{2} + 2\pi n; \frac{\pi}{2} + 2\pi n) - \text{ф-я } \cap$$

$$(\frac{\pi}{2} + 2\pi n; \frac{3\pi}{2} + 2\pi n) - \text{ф-я } \cup$$

②

$$3) \quad y = x^5 - 10x^2 + 7x$$

$$y' = 5x^4 - 20x + 7$$

$$y'' = 20x^3 - 20$$

$$y''(x) = 0 \quad \Leftrightarrow \quad x = 1$$

$$y''(0) = -20 \leq 0$$

$$y''(2) = 120 \geq 0$$

$$\Rightarrow (-\infty; 1) - \text{p-1} \quad \cap$$

$$(1; +\infty) - \text{p-1} \quad \cup$$
